Education

The University of Texas at Dallas

MS in Information Technology & Management

Aug 2025 – Dec 2026

GPA: 3.83

Relevant Coursework: Vector and Graph Database, Cloud Computing, IT & Systems Management

Visvesvaraya Technological University

BE in Mechanical Engineering

Aug 2017

GPA: 3.70

Skills

Programming Languages: Java 8/17, Python, SQL

Backend & Frameworks: Spring Boot, Spring MVC, Microservices Architecture, REST APIs, Hibernate/JPA, JDBC

Cloud & DevOps: AWS (EC2, S3, RDS, IAM), Docker, Kubernetes, Jenkins, Git, GitHub Actions, CI/CD Pipelines

Databases & Caching: PostgreSQL, MySQL, Oracle SQL, Redis, Neo4j, Milvus, FAISS (Vector DBs)

Tools & Platforms: IntelliJ IDEA, Maven, Postman, Apache Tomcat

Testing & Security: JUnit, Mockito, OWASP Security Standards

Projects

FlowCharge: Distributed Subscription Billing System — Java, Spring Boot, Kafka, PostgreSQL, Redis, AWS

- Architected a distributed billing engine handling 10,000+ transactions/day with recurring payments, invoice generation, and usage-based metering; engineered Kafka workflows with idempotency and dead-letter queues for fault-tolerant execution.
- Ensured transactional consistency via PostgreSQL and Redis caching (cutting query latency ~40%); deployed on AWS (EC2, RDS, S3) with Docker CI/CD pipelines, improving release throughput and reliability.

TalentRadar: Semantic Resume-to-Job Matching Platform — Python, SBERT, FAISS, Weaviate, Neo4j, Docker

- Built a vector-search pipeline using SBERT and FAISS/Weaviate to semantically match resumes to job descriptions, achieving ~85% relevance accuracy beyond keyword overlap.
- Integrated Neo4j skills graph for relationship-aware ranking; containerized the full stack with Docker Compose, cutting environment setup to under 5 minutes.

Experience

Student Worker

The University of Texas at Dallas

Aug 2025 – Present

Richardson, TX, USA

- Executed high-volume service operations efficiently in a fast-paced environment, consistently meeting peak-hour demand targets.
- Enforced operational and safety compliance standards while collaborating across a 10+ member diverse team.
- Streamlined daily shift workflows through proactive task coordination, contributing to measurable service delivery improvements.

Software Engineer

CGI Inc, Bengaluru, India

Oct 2021 – Jul 2025

Telecom Domain — Bell Canada

- Engineered multiple Spring Boot microservices powering telecom billing, provisioning, and customer management workflows, improving API throughput and reducing service latency across high-volume enterprise systems.
- Developed and versioned RESTful APIs enabling seamless integration across multiple enterprise applications, reducing manual intervention and improving downstream service reliability.
- Migrated 2 legacy Struts-based modules to Spring Boot and integrated backend services with AWS (EC2, S3, RDS), eliminating recurring production defects and improving deployment consistency across environments.
- Optimized complex Oracle SQL queries and stored procedures, reducing execution time by up to 50% for critical telecom and billing operations.
- Strengthened CI/CD workflows using Jenkins, Docker, Maven, Git, and GitHub Actions, reducing manual deployment effort and increasing release velocity.
- Applied OWASP security best practices, reducing audit vulnerabilities by 30% and strengthening overall application security posture.

Certifications

AWS Solutions Architect – Associate

Dec 2025

Advanced Certificate Program in Data Science – IIIT Bengaluru

May 2025
